## BizMile Tracker Validated Mileage Report

The mileage data within this report was generated with state-of-the-art cartographic shortest route algorithms that are standard within the mapping industry. The place location (latitude and longitude) from which the distances were derived are from current geocoding libraries from Tele Atlas and Navteq. These companies supply the most geo-positionally correct U.S. maps commercially available. Because of these factual derivations and industry best practices, these logs are validated by these standards to be accurate.

This report meets the criteria that the Internal Revenue Service set for accurate and timely record-keeping, provided that the user's source data for appointments was derived from an appropriately maintained daily appointment record, such as DayTimers, Microsoft Outlook, GoogleCalendar or similar daily log that recorded appointments.
